YZR · SUPERCHAT DESIGN CHALLENGE

Tap to Trust

Aria and the 5%

ZAHRA · YUNRONG · ROBERT

THE TEAM

Who we are

Three designers and builders who turn complex systems into decisions people can actually make. **Exactly what the 5% problem needs.**

Z

Zahra Zare

UX/UI DESIGNER

Reads workflows before screens. Systems thinking — spots when a "UX problem" is actually a broken process, and designs the fix at the right layer.

Y

Yunrong Jhan

UX/UI PRODUCT DESIGNER

Turns complex systems into decision-based UX. Shipped across Airbus, SaaS, AI, consumer — activation and task efficiency through data-driven design.

R

Robert Sicken

PRODUCT MANAGER

Ten years across dev, services, and product. Comfortable in code, strategy, and the messy space between. Keeps scope tight and the build moving.

CONTEXT · 10 SECONDS

Agents used to ~~talk.~~ Now they act.

- 📦 Reorder stock
- 📅 Confirm bookings
- 👥 Reshuffle shifts
- 💬 Reply to guests

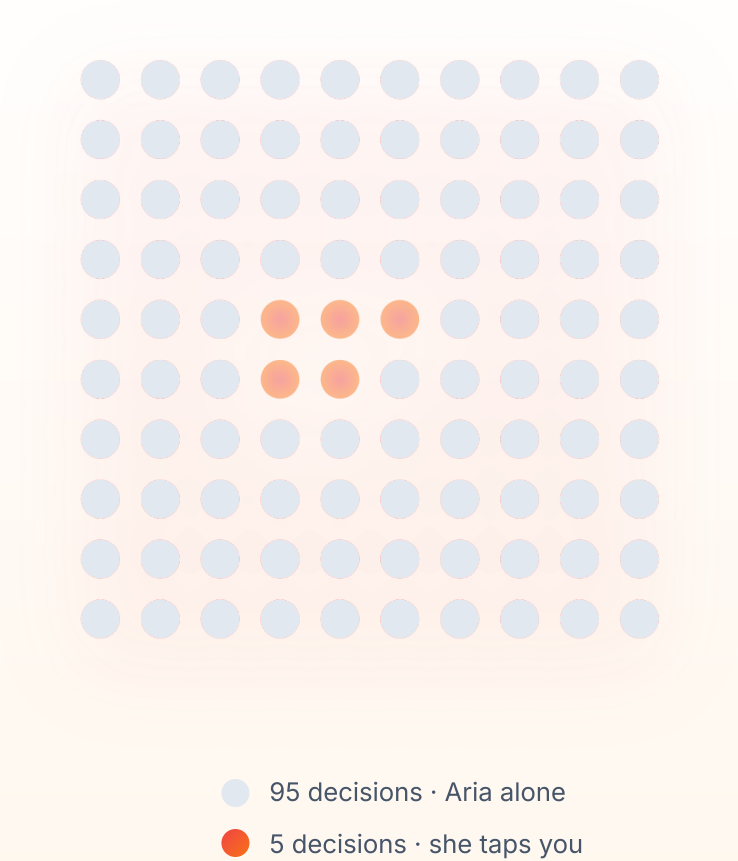
Hundreds of small decisions a day. Most of them, the manager never sees.

THE FRAMING

Aria handles 95 on her own.

The other 5% is where design lives.

Time-sensitive. Budget-sensitive. Relationship-sensitive. The ones where two rules collide and Aria can't pick without you.



Meet Aria

Superchat's agentic system for restaurants. Wired into the whole operating stack — live data in, action out.

Aria is connected to:

- 📅 **Booking** — reservations, cancellations, waitlist
- 📦 **Inventory** — supplier orders, stock, prices
- 👥 **Shifts** — rotas, sick-calls, cover
- 💬 **Comms** — WhatsApp, email, voice

She acts autonomously on the vast majority. *When two rules collide — she stops and asks.*

Today, so far: 47 bookings confirmed · 6 cancellations · 3 supplier orders · 112 guest messages · 2 shift swaps

→ Needed you: 1

WHO WE DESIGNED FOR

The restaurant manager.

Mid-shift.
Hands full.
Loud room.

Can't read long text. Maybe can't type at all.

"Voice? A glance? A tap?"

We deliberately picked the hardest persona. If it works here, it works everywhere.

THE SCENARIO

Fish for tonight. Four hours to service.

A single, realistic Monday afternoon · 38 covers booked · fish on the menu.

DAYS AGO

rder placed

CONFIRMED · IN BUDGET

Aria placed the standard weekly fish order with **Vendor 1**. Off the manager's plate.

14:20 TODAY

Vendor fails

NOT DISPATCHED

V1's delivery flips: no driver, no ETA. **38 covers booked · 4h to service.**

14:26

Aria escalat

RULES COLLIDING

V2 can deliver — but **+22% over budget**. V3 silent. Aria can't pick between two of your rules.

THE MOMENT · LIVE DEMO

A single tap on a lock screen.

Three things visible. Everything else a long-press away.

THE INSIGHT

Not a menu. An opinion.

Aria doesn't offer four neutral choices. She **picks one** — the call she'd make if she had the authority — and lets the manager override.

> *Aria isn't a form. She's a colleague who has an opinion — and respects that you might overrule her.*

Accept Vendor 2's price ARIA'S PICK

confidence 58% · +€180 over budget

Wait for Vendor 3's quote
